## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. **Claims 1-13 and 14-25**, drawn to **a methods for removing cells from a skin portion of a subject** inflicted with a dermatological lesion, classified in class 604, subclass 290.
- II. **Claims 26-38**, drawn to **a device having a first reservoir and an applicator**, classified in class 604, subclass 289.
- III. **Claims 39-58**, drawn to **a device having a first reservoir, a first receptacle, a second reservoir, a second receptacle, a mixing chamber, and an applicator**, classified in class 604, subclass 315.
- IV. **Claims 59-84**, drawn to an **applicator** having an inlet port, a first tube structure, a second tube structure, and an outlet port, classified in class 604, subclass 541.
- V. **Claims 85-91**, drawn to an **applicator** for streaming a solution over and in contact with, a skin portion of a subject, the applicator comprising a housing having a skin-facing opening, at least one inlet and at least one outlet, the at least one inlet and the at least one outlet each providing a passageway for streaming the solution therethrough and over the skin portion defined by the skin-facing opening, wherein the opening of at least one inlet and at least one outlet through which the solution streams is

height adjustable with respect to the skin-facing opening, such that the applicator physically conforms to a non-smooth skin surface of the subject, classified in class 604, subclass 40.

The inventions are distinct, each from the other because of the following reasons:

**Inventions I and (II-V)** are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the methods do not require all the structural elements disclosed in the apparatus groups; therefore, the process as claimed can be practiced with another materially different product.

**Inventions II-V** are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions II-V have separate utility in view of the structural differences mentioned above. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
